# MISSISSIPPI STATE DEPARTMENT OF HEAL FH 3 MAY 23 PM 3: 40 BUREAU OF PUBLIC WATER SUPPLY

# CCR CERTIFICATION FORM CALENDAR YEAR 2012 BRYANDALE PWS ID MS0010010 Public Water Supply Name

List PWS ID #s for all Community Water Systems included 1n this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year of electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please check all boxes that apply.

CH	eck an boxes ma appry.
	Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
	Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill) Email message (MUST Email the message to the address below) Other
	Date(s) customers were informed:
	CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used
	Date Mailed/Distributed:
	CCR was distributed by Email (MUST Email MSDH a copy)  As a URL (Provide URL as an attachment As text within the body of the email message
	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
	Name of Newspaper:
	Date Published:
	CCR was posted in public places. (Attach list of locations)  Date Posted:
冈	CCR was posted on a publicly accessible internet site at the following address (DIRECT_URL REQUIRED):

DEFINITIONS

#### BRYANDALE Adams County, Mississippi Public Water Supply I.D. No. MS0010010

The Water We Drink - Total Environmental Solutions, Inc. (TESI) is pleased to present our Annual Water Quality Report for the year 2012. This report is designed to inform you about the quality of your water and the services we deliver to you every day.

Is My Water Safe? Yes, TESt diligently safeguards its water supplies and although we did not complete the required monitoring for Nitrales (as shown below) and cannot be sure of the quality of your water at that time, all subsequent tosting has shown that your tap water has met alt US EPA & state drinking water standards.

Do I need to take any special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIVI/Aids or other immune system disorders, some elderly, and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provides. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosportidum and other microbiological contaminants are available from the Safe Drinking Water Hotino at (800) 426-4791.

Where does my Water come from? The water source for Bryandale is one (1) well located off Highway 84/98 which draws its water from the Lower Catahouta Formation.

Source Water Assessment and its availability - A Source Water Assessment Plan (SWAP) is available from the Mississippi State Department of Health for this system. This Plan is an assessment of a delineated area around our listed source through which contamination, if present, could migrate and reach our source water. It also includes an invantory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources.

why are there contaminants is my Drinking Water? Drinking water, including bollide water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water pase a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap and bottled) include rivers, takes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radiocarbive materials, and can pick up substances resulting from the presence of entires or from human activity, microbid contaminants, such as viruses and becteria, that may come from sewage treatment plants, septic systems, agriculture/kivestock operations, and widdle. Inorganic contaminants, such as satis and melas, which can be naturally occurring or result from the ban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volated organic chemicals, ordinationally included in drusting protection, and can also come from a variety of sources such as agriculture, urban storm water runoff, and residential runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities. In order to ensure that your lap water is sele to drink, EPA provided the same protection for public neaths.

How can I get Involved? In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all our customers. If you have a particular question about your water supply, please contact Brannan Corley @ 800-866-3561.

Additional information for Lead - If present, clevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Bryandale Water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Holline or at http://www.esa.covs.admater.too/. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact (601) 576-7582 if you wish to have your water tested.

Beginning January 1, 2004, the Mississippi State Department of Health (MSDH) required public water systems that use chlorine as a primary disinfectant to monitoritiest for chlorine residuals as required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements and found no Maximum Residual Disinfectant Level (MRDL) violations.

	The state of the s													
Residuals	Sampling Period	Range (Low(High)	MCL RAA'	Units	RAA Date	RAA Your Water	Typical Source							
Chlorine	Jan-Dec 2012	0.70 0.80	4.0	mg/L	2012	0.80	Water additive used to control microbes							
*RAA & Running Annual As	PET 3 O.O.				h	1 V-V-	Troits popular para to compositations							

The water system was tested a minimum of one (1) monthly sample in accordance with the Total Coliform Rule. Duting the monitoring period covered by this report, the following detections were noted: There were NO positive bacteriological samples during the monitoring period of January 1st to December 31st, 2012.

Radionuclides - No violations were detected in the results for the Calendar Year 2012.

Contansinant	Required Sampling Frequency	Number of Samples Taken	Date Sampled	₩CL	Your Water	Health Effects
Nitrate/Nitrite	Annually	1	1/18/2012	10ррт	-prophis	Infants below the age of six months who d'rink water containing Nibrate/Nibrite in excess of the MCL could become seriously iit, and if universed may die. Symptoms include shortness of breath and blue-baby syndroms.

In the table below, we have shown the dinking water contaminants that were defected during the calendar year of this report. The presence of contaminants does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done during the calendar year of this report. The EPA or the State required us to monitor for certain contaminant less than once per year because the concentrations of these contaminants do not change frequently.

DBP Conteminants					MCL	Unit	Your Water	Violation	Typical Source		
Tribelomethanes, Total (TTHM)			June 26, 2008		90	ppb	28.25	No	By-product of drinking water disinfection		
Haloacetic Acids, Total (HAA5)			June 26, 2008		60	ppb	37	No I	By-product of drinking water disinfection		
Inorganics	Sample Date	MCL	Unit	Your Water	Violation	Ĭ	Typical Source				
Barium	April 27, 2011	2	ppm	0.0048	No		Discharge of drilling wastes; discharge from metal refineries; erosion of natural neposits				
Fluoride	April 27, 2011	4	ppm	0.587	No	Fit			strong leath; discharge from fertilizes & aluminum factories		
Lead	2009/2011	15	ppb	1.0	No	1	Corrosion of household plumbing systems; erosion of natural deposits				
Copper	2009/2011	1.3	ppm	0.2	No	Corresion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives					

## \*\*\*\*April, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING\*\*\*\*\*

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007- December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSOH was required to Issue a violation. This isto notify you that as of this date, your water systemhas completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at (601)576-7518.

Thank you for allowing us to continue to provide your family with clean, quality safe drinking water this year. In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all of our customers. Please call our office if you have any questions.

We at TESI, work around the clock to provide top quality drinking water to every tap of every customer of the Bryandake Water System. We ask that all our customers help us to profect and conserve our water sources, which are the heart of our community, our way of life, and our children's future.
